Damage (Crack Pattern, Width and Extent) Progression

IP Wall Behavior

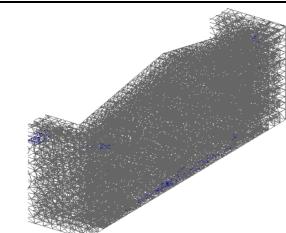

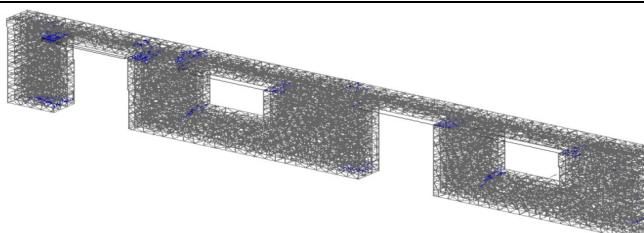

OOP Wall Behavior

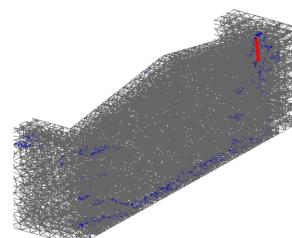

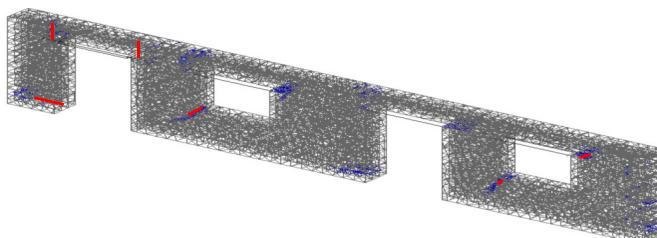

OP Threshold: Hairline cracks (blue) of maximum width 0.1 mm appeared at few corners of doors and windows.

OP Threshold: Hairline cracks appeared at the connection with the in plane walls. Max crack width 0.1 mm.

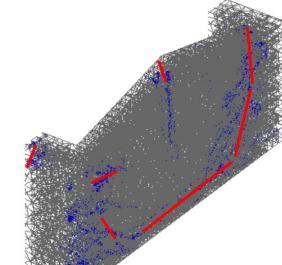

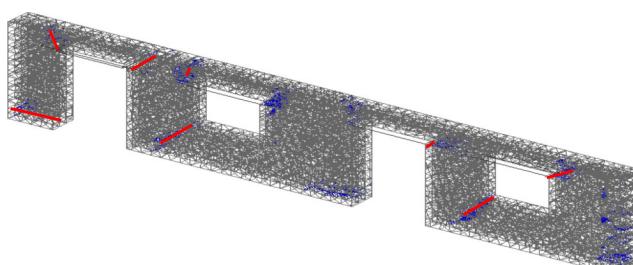

IO Threshold: Hairline to minor cracks of maximum width 0.5 mm developed at most of the corners of the openings, few piers and spandrels start to develop shear and flexural cracks, respectively.

IO Threshold: Minor cracks (blue) start to extend downwards at the IP connection with a maximum crack width of 2 mm. A horizontal crack (blue) of maximum opening 1 mm appears at the bottom.

LS Threshold: Left most pier start to damage in flexure with major cracks of 5 mm maximum width. Other piers also start to develop shear and flexural cracks.

LS Threshold: Major cracks (red) of 4 mm maximum width developed at the IP walls connections. A horizontal crack (blue) of maximum opening 1 mm appears at the bottom.

CP Threshold: Most piers and spandrels start to damage in shear/flexure with major cracks (red) of width of more than 5 mm.

CP Threshold: Wall on the verge of collapse. Well shaped major cracks of average width more than 4 mm (red) appeared through out as U shaped mechanism.
